

Based on the provided resume, I'd rate it a score of 60 out of 100. Here's a detailed breakdown of the evaluation:

#### ATS Compatibility: 40/100

- \* The resume format is a bit unconventional and might not fully comply with applicant tracking system (ATS) requirements. ATS systems typically look for specific formatting standards, such as clear headings, bullet points, and consistent spacing.
- \* The resume lacks keywords related to relevant industries, which could reduce its visibility in ATS searches.

#### Skill Relevance: 70/100

- \* The candidate has demonstrated some relevant skills, such as Python programming, web designing, and SQL.
- \* However, the skills section is not clearly organized or formatted, making it difficult to quickly scan the resume for relevant skills.

#### Formatting: 50/100

- \* The resume has an unusual layout, with sections not clearly defined or separated.
- \* The formatting is inconsistent, with varying font sizes and styles throughout the document.
- \* There is no clear hierarchy of information, making it hard to focus on the most important details.

#### Suggestions for Improvement:

1. **Reformat the resume**: Use a standard resume format with clear headings, bullet points, and consistent spacing to improve ATS compatibility and readability.
2. **Emphasize relevant skills**: Create a separate skills section with bullet points, and prioritize the most relevant skills to grab the reader's attention.
3. **Use keywords**: Incorporate industry-specific keywords related to the desired job and industry to increase visibility in ATS searches.
4. **Simplify the personal profile**: Remove the personal details, such as father's name, date of birth, and address, as they are not essential for a professional resume.
5. **Quantify achievements**: Instead of using general statements, try to quantify achievements by including specific numbers and metrics, for example, "Improved project completion rate by 30% through efficient resource allocation."
6. **Use action verbs**: Replace vague verbs like "organized" with more descriptive action verbs like "managed," "created," or "developed."
7. **Highlight certifications**: Move the certifications to a separate section, and consider adding relevant details, such as the certification type, duration, and level.

By addressing these suggestions, the candidate can improve their resume's chances of being noticed by ATS systems and human recruiters, while also showcasing their skills and achievements more effectively.
